LibSpace Project - Overview

- LibSpace is a smart library management and space utilization system designed to help students easily find books and available study spaces in a library

Problem Statement

- **Large libraries often face problems like difficulty finding books, lack of information about available study space, and inefficient manual management.**

Objectives of LibSpace

Improve library space usage

Help students locate books quickly

Provide real-time information about study

areas

Simplify library management

Key Features

Book search system

Study space availability tracking

User-friendly interface

Digital library records

Notifications for book availability

Technology / System Design

Frontend: Web or Mobile interface

Backend: Database for book records

Admin panel for librarians

System to track and update space availability

Benefits and Conclusion

- **LibSpace improves the overall library experience by saving time, organizing resources efficiently, and helping students use library facilities effectively.**
